Create a website about yourself using HTML and CSS.
Make sure to include:

- Your Name
- A Picture of Yourself (Optional)
- A paragraph about yourself
- Your Hobbies and Pictures to go with them (at least 3 hobbies) - Optional: Use an unordered or ordered list to organize your hobbies, and hyperlink them to Wikipedia pages about that hobby.
- Create a short form that asks the user to guess what your favorite hobby is
- A paragraph about what you want to be when you grow up
- A link to one of your previous projects

Make sure to:

- Comment out your code so that it is easier to follow along.
- Use **HTML semantic elements.**
- Use fallback code for images in case they don't load.
- Use CSS to make your website look beautiful.

  - Use both in-line styling and linking external stylesheets.
  - Use classes and IDs in HTML to make working on the external stylesheet easier.

Optional: Create a list at the top of your page to function as a menu bar. List to the different sections in the page.

Submit your Github repo (your exact folder submission on Github)
